

Simplify security, stay productive

Protect company data and lower costs

Unsecured company data can cost businesses millions of dollars in lost research and development and can damage customer confidence. But security measures shouldn't make it harder for your workers to get their jobs done.

Microsoft Enterprise Mobility + Security (EMS) helps secure your business and maintain worker productivity with features like:

- Identity and access management
- Information protection
- Device and application management
- Cyber intrusion detection

Manufacturing security needs

Protect product designs, formulas, patents, and other IP

Secure RFPs, contracts, and sales communications

Lock down mobile devices used by traveling executives

Provide plant managers easy and quick access to any application

Give all factory workers access to HR apps from any device

EMS can help...

Implement multi-factor authentication (MFA) to help prevent unauthorized access. **Secure information** across file servers, email, and collaboration platforms with **document tracking and encryption**.

Encrypt all documents shared with suppliers so that only authorized users can view them – inside or outside of the company.

Enforce corporate security policies on any device platform to allow access to corporate resources. Enable IT to **selectively remote wipe** corporate information from stolen devices.

Enable single sign-on (SSO) so managers only need one password to access all their applications – no matter where they are.

Use mobile device management and cloud-based identity to allow non-office workers secure access to personal benefits and payroll data from their own devices.

“Microsoft EMS gives us the ability to manage global user accounts from the cloud, provide single sign-on to Office 365 and other applications, and enable associates to encrypt individual documents.”

– U.S Chemical Company

Why EMS is right for manufacturing

EMS includes Azure Active Directory, Azure Rights Management, Microsoft Intune, and Advanced Threat Analytics to provide organizations with cost-effective, comprehensive security for users, devices, applications, and data.

Low licensing and implementation costs

- Comprehensive security coverage for nearly half the price of third-party solutions.
- Self-service password reset can reduce Help Desk calls by an average of 25%.
- Simple set-up, always up to date, and connects to your on-premises datacenter.

Layered protection against data theft

- Multi-factor authentication engine that processes billions of requests every week.
- Data encryption that follows documents everywhere.
- Behavioral analytics to pinpoint cyber attacks before information can be compromised.

Safe, flexible access to corporate resources

- Corporate policy enforcement for accessing resources from corporate or personal devices.
- Single sign-on to any application on your favorite device.
- Managed access to more than 2,500 pre-integrated SaaS applications, as well as your own custom cloud or on-premises hosted web applications.
